SAEM 2026 ACCEPTED ABSTRACT · PEDIATRICS

Academic Year Patterns in Pediatric Psychiatric Emergency Department Visits

Samuel Reed, MD — PGY-3, UVA EM · **Faculty Mentor:** Moira Smith, MD · Site: UVA Children's ED

RESEARCH QUESTION *Do pediatric psychiatric ED visits at UVA show recurring, predictable patterns across the academic calendar — and where do the surges fall?*

1 CONTEXT · WHY THIS MATTERS

2 METHODS

upstream school-based mental-health resourcing tuned to the calendar, and for ED staffing models that anticipate — rather than absorb — these recurring peaks.

should flex to the academic calendar.

- **Upstream opportunity.** School-based mental-health resourcing may blunt the ramp before it reaches the ED.

→ Whether the surge pattern looks different by age band (≤12 vs. 13–17).

→ What we'd want to do next with school health partners and the UVA peds clinic network.

Come say hi — we'd love to talk through it.

FUNDING
No external funding. Investigator-initiated.
